

Election Manifesto 2026
Green Party, Uppsala County

A Future to Look Forward To

English version

miljöpartiet de gröna

UPPSALA LÄN

Green politics for a fair and sustainable Uppsala County

We believe it is possible to protect the climate and the environment while ensuring good healthcare, good schools and a strong welfare system. We also want rural areas to thrive, culture to develop and more people to feel included in society.

We believe change works best when it is fair and takes all people into account. We want to reduce emissions, increase equality and strengthen security.

The decisions made today affect the future. Therefore, this manifesto highlights the issues we consider most important during the next four years.

The Green Party wants to invest in:

- Sustainable travel throughout the county
- Equal and accessible healthcare
- A fair climate transition for everyone

miljöpartiet de gröna

UPPSALA LÄN

Sustainable travel throughout the county

We want to make it easier to walk, cycle and travel by bus and train. People should be able to travel easily whether they live in a city or in the countryside. We want more people to choose public transport and cycling. Therefore, more buses and trains, more departures and better travel opportunities are needed throughout the county.

The Green Party wants

- Affordable, reliable and easy-to-use public transport
- More train stops and departures
- Expanded railway between Uppsala and Enköping
- Opening the new tramway and planning more lines
- More safe cycle paths throughout the county

Equal and accessible healthcare

We want everyone to receive healthcare when they need it. Patients' needs should guide healthcare, not profit.

The Green Party wants

- Better mental health support for children and young people
- Easier access to child and adolescent psychiatry
- Better healthcare for women
- More accessible care throughout the county
- Patients' needs to come before company profits

A fair climate transition for everyone

Climate change is one of the world's greatest challenges. We want to make it easier for people to live in ways that are good for the climate and environment.

The Green Party wants

- Clear climate and sustainability requirements in public procurement
- More organic and locally produced food
- Investment in solar, wind and biogas energy
- More transport moved from roads to rail and shipping
- Protection of nature and biodiversity
